RESEARCH Associate Professor **2021-Present**

UNIVERSITY OF CALIFORNIA, MERCED, Merced, CA

Research focus: Host immunity to *Toxoplasma gondii*, and how *Toxoplasma* virulence factors manipulate host immune responses

- For the first time in a parasite, the GPI sidechain synthetic pathway was defined, called “PIGE” and “PIGJ”, these *Toxoplasma* glycosyl-transferases build the Glc+GalNAc sidechain and discovered that the sidechain prevents parasite virulence.
- Discovered that polymorphisms at a single locus derived from the Collaborative Cross determine vaccine-induced immunity to *Toxoplasma* through enhanced Tcm development (unpublished).

Assistant Professor

2014-2021

UNIVERSITY OF CALIFORNIA, MERCED, Merced, CA

Research focus: Host immunity to *Toxoplasma gondii*, and how *Toxoplasma* virulence factors manipulate host immune responses

- Discovered that *Nfkbid* is required for host immunity and B cell antibody responses to secondary infections with *Toxoplasma* using a genetic screen.
- Identified an NLRP3-dependent, inflammasome-independent pathway that promotes CD8 T cell IFN γ responses to *Toxoplasma*.

Post-Doctorate Work

2008-2014

MASSACHUSETTS INSTITUTE OF TECHNOLOGY, Cambridge, MA

Advisor: Dr. Jeroen Saeij, Department of Biology (Currently UC Davis)

Research focus: Host immunity to *Toxoplasma*, and how *Toxoplasma* virulence factors manipulate host immune responses

- Demonstrated that most parasite strains actively evade the immunological memory response elicited by chronic infection or vaccination and this requires parasite expression of the ROP5 pseudokinase.
- Elucidated how two polymorphic parasite effector proteins, GRA15 and ROP16, determine macrophage activation, M1 vs. M2.
- Determined that the parasite ROP16 effector kinase dampens intestinal inflammation and promotes host resistance after oral infection.
- Explored the genetic basis for different macrophage responses to cytokine stimulation and parasite infection.

Graduate Thesis

2001-2008

STANFORD UNIVERSITY SCHOOL OF MEDICINE, Stanford, CA

Advisor: Dr. Yueh-hsiu Chien, Department of Microbiology & Immunology

Title: "How Self Non-Self Discrimination Determines Two Pro-inflammatory Subsets of Lymphoid $\gamma\delta$ T cells: T $\gamma\delta$ - IFN γ s and T $\gamma\delta$ -IL-17s"

- First description of how TCR- ligand engagement in the thymus generates two populations of cytokine producing $\gamma\delta$ T cells- an "antigen-experienced" IFN γ - and an "antigen-naïve" IL-17-producing $\gamma\delta$ T cell population.
- Determined that positive selection was not required for $\gamma\delta$ T cell thymic development by analyzing non-classical MHC1b T22/T10-specific $\gamma\delta$ T cells.
- Demonstrated that IL-17 producing $\gamma\delta$ T cells respond days earlier than Th17 cells, thereby exacerbating disease in the mouse model of multiple sclerosis.

Master's Thesis

1998-2000

UNIVERSITY OF CALIFORNIA, SAN DIEGO, La Jolla, CA

Advisors: Dr. Eli Sercarz, Dr. Raja-Gabaglia, La Jolla Institute for Allergy and Immunology (LIAI)

Title: "In Search of a Peptide to Modify the Th2 Response Induced by LACK in the Model of Murine Leishmaniasis"

- Elucidated the MHCII IA^d LACK 161-175 peptide register.
- Inferred that altered TCR-peptide contacts significantly change IFN γ and IL-4 production by *Leishmania*-specific CD4 T cells.
